Art Unit: 3632

This is an office action for serial number 10/731,491, entitled A securing Bracket For A Floor Supported Laundry Appliance, in response to amendment filed on November 1, 2005.

Allowable Subject Matter

The indicated allowability of claim 3 is withdrawn in view of the newly discovered reference(s) to Verdesca 4,270,821.

Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Williams 5,954,307 in view of Linger 4,093,327 in further view of Verdesca 4,270,821. Williams discloses a securing bracket being an angle iron having a base portion (38) and a vertical arm (44) and floor supported object (10), a shock absorber means (32). Williams discloses all of the limitations

Art Unit: 3632

of the claimed invention except for the laundry appliance and a fastener means. Linger teaches that it is known to have a laundry appliance wherein the legs are casters. It would have been obvious to one having ordinary skill in the art to have modified Williams to have the wheeled castored object as a laundry appliance in order to prevent the laundry object from sliding or moving from a wall. Verdesca teaches that it is known to have a securing bracket comprising an angle iron (figures 5 and 6) having a base portion having an enlarged opening and a vertical arm having a slot communicating with the enlarged opening to receive a lag screw (32) protruding from a wall (46). It would have been obvious to one having ordinary skill in the art to have modified Williams in view of Linger to have included the lag screw to extend through the vertical arm of the angle iron including a slot and enlarged opening wherein the screw extends into the wall as taught by Verdesca for the purpose of providing a better securing means to the bracket therefore preventing accidental removal from the wall.

Art Unit: 3632

Allowable Subject Matter

Claims 4-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 5, 9 and 10 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art discloses conventional hold down means.
